About EUROSTUDENT

The EUROSTUDENT project collates comparable student survey data on the social dimension of European higher education, collecting data on a wide range of topics, e.g. the socio-economic background, living conditions, and temporary international mobility of students. The project strives to provide reliable and insightful cross-country comparisons. The data presented here stem from the sixth round of the EUROSTUDENT project (2016-2018) and is available for 28 countries.

Although the data presented in this country profile refers to all students in a specific country, EUROSTUDENT also has data on several different focus groups. EUROSTUDENT focus groups allow the identification of certain groups of students, based on their socio-demographic characteristics, past and current educational situations, and current living situation.

The comparative report "Social and Economic Conditions of Student Life in Europe" (2018) provides insight into many other questions related to students' characteristics as well as other aspects of student life in Europe. Furthermore, the EUROSTUDENT database allows users to explore country data by topic area or by focus group and in comparison between countries. Also visit www.eurostudent.eu for more information and results.
